

BUSINESS MEMBER SPOTLIGHT: McKenzie Valley Pump | Ted West

For more than four decades, McKenzie Valley Pump has been helping local families and businesses keep one of their most essential resources flowing – clean, reliable water.

Owned by Ted West and based in Springfield, the company serves communities across the McKenzie River Valley and greater Lane County with well pump installation, repair, filtration systems, water testing, and custom-designed solutions for residential and small commercial properties. With decades of experience and a knowledgeable team, their work is rooted in problem-solving, precision, and long-term reliability.

At its core, McKenzie Valley Pump is a community business. Their customers are often neighbors – people who rely on well systems every day and need someone they can trust when something stops working. From new installations to urgent repairs, the team is known for showing up, listening carefully, and tailoring each solution to the unique needs of the property.

Many projects are fully custom, from UV filtration systems to complete pump replacements and water quality improvements. Behind the scenes, the focus is always the same: quality workmanship, thoughtful design, and making sure each system works exactly as intended.

Vida McKenzie Community Center • Rooted in Community, Growing Together

Owner Ted West, McKenzie Valley Pump

Customers frequently describe the company as responsive, knowledgeable, and dependable – the kind of team that answers the phone early, explains the problem clearly, and stays with a project until water is flowing again.

For Ted and his team, the most rewarding part of the work is simple: seeing a project completed successfully and knowing a home or business is back up and running.

As a VMCC Business Member, McKenzie Valley Pump values the connection to the community and the opportunity to support and serve local residents.
